DETAILED ACTION

This application is a continuation of Serial No. 09/053,260.

Claim 22 is pending in this Office Action.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by U. S. Patent No. 5,848,274 issued to Hamby et al. ("Hamby").

With respect to claim 1, Hamby teaches a method of resolving computer code having a plurality of types of code structures (col. 4, lines 47-50; "...bytecode representation of the program, which is both compact and target-independent, and than have an

interpreter at the client execute the bytecode"), each type of code structures including a plurality of index references (col. 5, lines 39-40; "the code objects and intermediate symbol or IL symbols are stored in a resident persistent table") as claimed comprising the steps of

Reading a list of identifiers for each type of code structure (col. 5, lines 54-56; "the Incremental Imager which forms the program image from code objects and their respective IL symbols stored in a persistent symbols table"), each list including an index reference corresponding to each of the identifiers in the list; and

Replacing each of the index references in the computer code with the respective identifier corresponding to each respective index reference (col. 5, lines 36-39; "an incremental builder resident in the system is invoked which translates the source code files into code objects and their corresponding intermediate language (IL) symbols").
